

Abstract of the Disclosure

A modular plug-in electrical wiring system that includes a pair of intermatable modular units that avoids the presence of a tangled mass of bare wires and wire nuts associated with conventional receptacle systems.

5 A first unit is secured within a wall recess, such as between a pair of building studs, while the second unit slidable engages the first unit and may be removable secured thereto. The system is versatile as it can be used for mounting electrical appliances to a wall/ceiling.
